

Preparing PreK-12 Teachers to Facilitate the Computer Science Experience

Project Lead The Way's PreK-12 computer science pathway is designed to be accessible to all teachers, even those with limited computer science knowledge and skills.

Teachers who are excited, curious, enthusiastic, willing to learn new things, and comfortable acting as a facilitator of the learning experience are empowered to confidently bring computer science to the classroom through PLTW Professional Development.

More options and flexibility – including in-person, online, and job-embedded training experiences – meet teachers' varied backgrounds and learning styles.

Hands-on learning experiences challenge teachers to look at their classrooms in a new way and immerse them in the role of the student.

Career learning opportunities bring industry experiences to life and empower teachers to take this inspiration back to the classroom.

Expert guidance helps teachers build confidence to transform their classrooms with PLTW's activity-, project-, problem-based instructional approach.

Ongoing support through myPLTW and the PLTW Solution Center allows teachers to focus on inspiring, empowering, and engaging students.

“ PLTW does a really good job of scaffolding ideas and building that foundation for the students and for the teachers. It didn't feel like this huge monstrosity I had to learn in order to conduct the class. ”

– Justin Delos Reyes, PLTW Computer Science teacher

WE HAVE YOU COVERED. PLTW TRAINING GUARANTEE.

PLTW protects a district's investment by guaranteeing if a teacher leaves within three years of earning a PLTW credential and goes to another PLTW district, PLTW will provide a grant in the amount of the training fee for the district to train a teacher in the same course and prevent disruption in student learning.

Guarantee applies to any credentials earned beginning June 1, 2019, and afterward. Other restrictions may apply.
